

# IDEAS, Share Hettiarachchi

→ bubble size = fires / frequency / area burned

Pie chart which state has most fire

Bubble map bubble = fire  $\beta$  saturation = count

Years → No. fires per state / country over time

→ Heatmap shows which months have more fires

Geo heatmap Saturated = more fires / area burned

Bar graph Area burnt total area relative comparison

# FILTER

overlap with bar graph

overlap with Bubblemap But Less detail

Geo Heatmap

# CATEGORISE

Australia vs World

State vs State

Fire count + Fire severity

Within year comparison

# COMBINE & REFINE

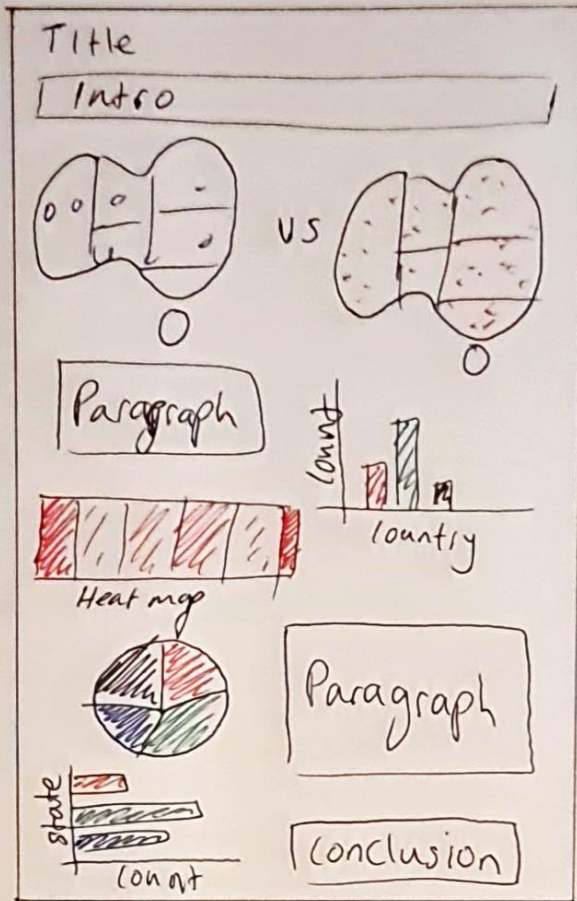

Heatmap Refine heatmap to entire Australia over the year for overall simplicity

# QUESTIONS

- 1.) Does it answer? "where are the fires?"
- 2.) How do fires compare to other disasters?
- 3.) Are there any missing points that are relevant?

# LAYOUT

## FOCUS

- Main focus → 2 map charts at top
- Focus shifts downwards
- After maps, focus is shared with all other components

Title: Initial dashboard view

Author: Shane Hettiarachchi

Date: 16/09/2025

Sheet: 2

Task: Create the view of the visualisation

## OPERATION

- Tooltips shown when hovering over data points

- Dropdowns to select data being displayed (Year, disaster)

## DISCUSSION

### Advantages

- Clear segments
- Good spacing between items
- Clear flow of information

### Disadvantages

- Focus obscures after maps
- No clear narrative.

# LAYOUT

## LANDSCAPE ORIENTATION

Title: Landscape dashboard  
Author: Shane Hettiarachchi  
Date: 16/04/2025

Sheet: 3

TASK: Design a Landscape dashboard

## OPERATION

Tooltips will be displayed when hovering over any data points =>

- Ability to select specific data via dropdowns.

## DISCUSSION

### Advantages

- No need to scroll vertically
- All information same level
- Ample space for everything
  - ↳ not cluttered

### Disadvantages

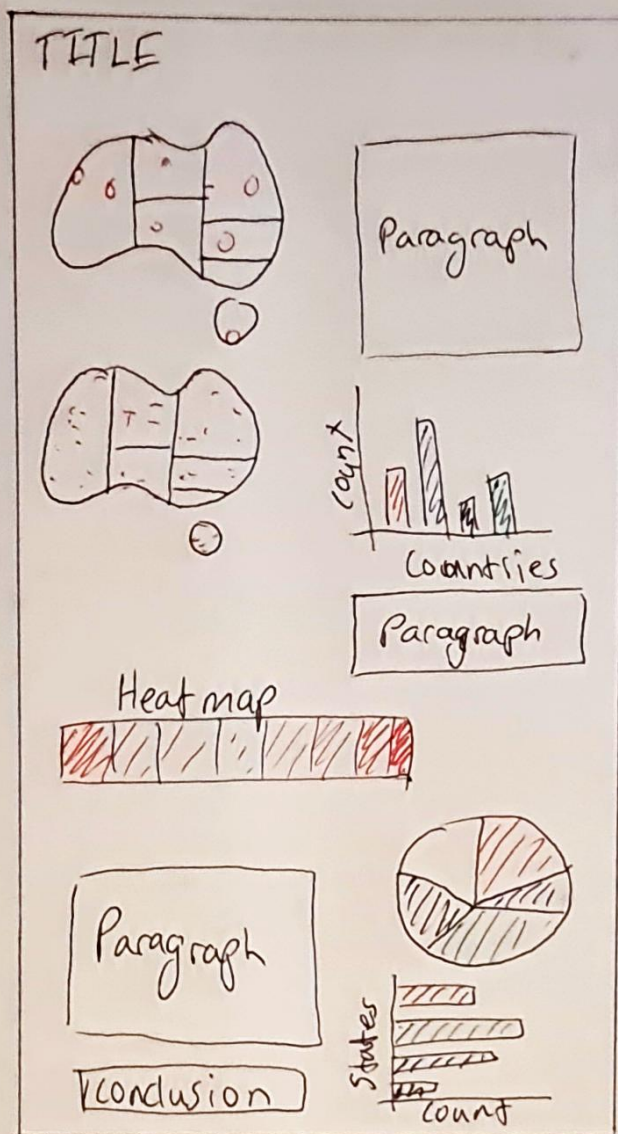

- After maps, focus obscures.
- NO real structure
- Charts not really spaced out

## FOCUS

- Main focus on the 2 map charts
- Focus then spreads to rest of visualisation
- Focus shifts horizontally  
LP Like reading

# LAYOUT

TITLE: Portrait dashboard

AUTHOR: Shane Hettiarachchi

DATE: 16/9/2025

SHEET: 4

TASK: Design portrait dashboard

## OPERATION

Tooltips when hovering over any data point

changeable maps to different data

## FOCUS

- No main focus

↳ But emphasis on the 2 mapcharts

- Focus shifts downward

## DISCUSSION

### Advantages

- Not clustered / roomy
- More narrative
- Clear path to follow

### Disadvantages

- Too much white space
- too little words
- No real focus

# LAYOUT

TITLE: FINAL design sheet  
AUTHOR: Shone Hettiarachchi  
DATE: 16/09/2025  
SHEET: 5  
TASK: Design final layout

## OPERATION

Disaster → Above first map  
A drop down to select  
which disaster to display

year → Near country  
bar chart to select  
different years.

Hovering over any  
data vis will show  
tooltips.

## FOCUS

- Main focus on initial 2 maps charts
- ↳ Highlight main point of visualisation
- Focus shifts naturally downwards
- Paragraphs aid understanding.

## DETAILS

### Dependencies

- vegalite - HTML
- VScode - Typescript
- Dataset (CSV/JSON)

### Estimates

- 2 weeks / no money

### Requirements

- Computer
- Datasets
